EDUCATION

Bsc in Information Technology

JaiHind College

05/2020 - 04/2023

Mumbai, India

12th Class

Thakur college of Science & Commerce

06/2018 - 04/2020

Mumbai, India

Percentage

- 80%

10th Class

U.S Ostwal English Academy

04/2013 - 04/2018

Mumbai, India

Percentage

- 79%

PERSONAL PROJECTS

1) Food Ordering Website (04/2021 - 04/2021)

- I made this project using php as I wanted to implement backend stuff.
- As php was easy to understand & implement thats why choose to learn first for getting into backend tech.
- I also learnt about mysql database as how it works and used its query in my projects.
- I really got some confidence & experience toward backend thing.

2) Whatsapp clone (05/2021 - Present)

- I was really excited to make this clone because I want to know i messages were sent realtime & stuff.
- I used react js for the front-end and firebase for the backend because it reflect the changes in realtime. I also used context api in this project.
- With react js this project was easy to make but i even faced some challenges and this project is not complete yet as i need to add some more feature.
- For this project I had taken some reference from a youtube channel clever programmer.

3) Netflix Clone (01/2021 - 02/2021)

- I got the idea for this while watching a show and then thought of building it out..
- I used react js for front-end part and by this project i got some great confidence and experience in react js. As I learnt about api stuff and all.
- I used firebase for authentication and hosting purpose.
- It was fun making this project as I was exploring things on internet and then implementing it in my project.

4) My Portfolio Site (12/2020 - 01/2021)

- I made my personal site because as an software engineer you should have your personal site.
- I made this using react js and this thing also gave me some great experience in react js.
- Your confidence really boost up when you show up your personal website to others and It kind off give you the motivation to do more.

SKILLS

React js

Data Structures & algorithms

firebase

python

javascript

Git & Github

Django

OOPs

Php

Mysql

Vs Code

CODING EXPERIENCE

Python

Have some great experience in it and working in this language for more than 1year and did my ds algo in this language. I love coding in this language.

Javascript

Javascript is everywhere, as my web development journey started when I learnt javascript and then it goes on, so from that time I was in love with it.

React js

A library which literally changed my life as we just have to write code 1 time & use it anywhere. Learnt about react-router-dom, props, hooks & a lot.

Php & Mysql

To start my backend journey, this was the language which I opted & it helped me to understand how things work and with this i also learnt mysql.

Django

As python was my strong part so I went for learning django and I have some decent knowledge in it because I have done only 2 projects with this .

Firebase

This thing literally took my heart as it's so good and provide so many feature with no cost. I use this for deploying my app or for using database.

Git & Github

At start it was little difficult to understand but as you work it seems easy. I haven't done any open source contribution but I'll do it for sure.

Other Projects(Reactjs, Javascript, Django)

The projects using REACTJS : weather app, covid tracker app, amazon clone. JAVASCRIPT: Music app, Typing Test. DJANGO: coding voting app & added authentication part also.

PROGRAMMING LANGUAGES

Python

Full Professional Proficiency

Javascript

Full Professional Proficiency

Php

Full Professional Proficiency

Java

Elementary Proficiency

INTERESTS
